Human Factors in Lighting, Third Edition Peter Robert Boyce, 2014-04-07 The availability of electric lighting has changed the lives of people the world over yet as a major user of electricity it has come under increasing scrutiny in recent years This scrutiny has focused largely on the environmental consequences with little consideration of the benefits of lighting Human Factors in Lighting Third Edition restores some balance to the discussion by examining the ways in which people interact with lighting These interactions influence the ability to perform visual tasks the perception of people objects and spaces human comfort and behavior as well as human health and safety It is only by understanding how to use light to achieve these ends that lighting can be provided effectively and efficiently to the benefit of all See What's New in the Third Edition New chapters on the non image forming system lighting for pedestrians light pollution and lighting and electricity use Revision of all other chapters to update them to take into account the advances that have been made in our understanding of the effects of light on people over the last decade Integration of the combined effects of light via the visual and non image forming systems on performance and perception The book covers both the visual and the non visual effects of light on people as well as the benefits of lighting and the costs it imposes on the environment It details the consequences of exposure to lighting or lighting technology and the role of exposure to light on such basic functions of the body as circadian rhythms The author combines information from many different sources and integrates them into a coherent overview of lighting practice that can be used to develop better lighting solutions at a lower environmental cost

how people interact with the space and how confident safe and secure they will feel when doing so. They also have a major influence on a person's sense of well-being and their ability to use the environment independently and without undue effort. Understanding how to use colour and contrast and how they are influenced by both natural and artificial lighting is vital for all those involved in the design and management of the environments and spaces we all use. In recent years there has been a considerable amount of work undertaken to further our understanding of how colour, light and contrast affect emotion and sensory abilities and how they can assist or hinder people in their everyday lives. Other publications consider these issues individually but *The Colour, Light and Contrast Manual* designing and managing inclusive built environments draws knowledge and information together to produce a unique comprehensive and informative guide to how the three elements can work together to improve the design and management of environments for us all. Solar Energy at Urban Scale Benoit Beckers, 2013-03-04 Increasing urbanization throughout the world, the depletion of fossil fuels and concerns about global warming have transformed the city into a physical problem of prime importance. This book proposes a multi-disciplinary and systematic approach concerning specialities as different as meteorology, geography, architecture and urban engineering systems all surrounding the essential problem of solar radiation. It collects the points of view of 18 specialists from around the world on the interaction between solar energy and constructions combining territorial, urban and architectural scales to better regulate energetic efficiency and light comfort for the sustainable city. The main subjects covered are measures and models of solar irradiance, satellite observations, territorial and urban ground measurements, sky models, satellite data and urban mock-up, radiative contribution to the urban climate, local heat balance, radiative aerodynamics, coupling evapotranspiration, Urban Heat Island, light and heat modeling, climate based daylight modeling, geometrical models of the city, solar radiation modeling for urban environments, thermal simulation methods and algorithms and urban planning with special considerations for solar potential, solar impact and daylight rights in the temperate, northern and tropical climates and the requirement of urban solar regulation.

Daylighting Peter Tregenza, Michael Wilson, 2013-01-11 This authoritative and multi-disciplinary book provides architects, lighting specialists and anyone else working daylight into design with all the tools needed to incorporate this most fundamental element of architecture. It includes an overview of current practice of daylighting in architecture and urban planning, a review of recent research on daylighting and what this means to the practitioner, a global vision of architectural lighting which is linked to the climates of the world and which integrates view, sunlight, diffuse, skylight and electric lighting, up-to-date tools for design in practice, delivery of information in a variety of ways for interdisciplinary readers, graphics, mathematics, text, photographs and in-depth illustrations, a clear structure, eleven chapters covering different aspects of lighting, a set of worksheets giving step-by-step examples of calculations and design procedures for use in practice and a collection of algorithms and equations for reference by specialists and software designers.
