

targets are elicited through picture naming and sentence repetition tasks. Data can be collected at both the word and sentence levels. Examiner responses are recorded and compared to a normative sample used to create normative data. The (GELA<sub>2</sub>) has a mean of 100 and a standard deviation of 15. Standard scores that fall between 85 and 115 are considered average as they compare to the test's normative sample.

#### **Performance Analysis: GPTA-2**

**STUDENT's** articulation skills were formally assessed using the GELA<sub>2</sub>. Assessment targets in the initial, medial and final positions of the word were elicited in single-word utterances and in sentences. To collect data in single-word utterances, **STUDENT** was presented with 48 colored pictures and was asked to name them spontaneously. During this task, **STUDENT** exhibited **X** speech errors and obtained a standard score of **X**. To collect data at the sentence level, **STUDENT** participated in sentence repetition tasks. During sentence repetition tasks **STUDENT** exhibited **X** speech errors and obtained a standard score of **X**.

| Error Type   | Initial Position   | Medial Position | Final Position | Designated Age at Acquisition (Years; Months) |
|--------------|--------------------|-----------------|----------------|-----------------------------------------------|
| Substitution |                    |                 |                |                                               |
| Omission     | Decrease Font Size |                 |                |                                               |
| Distortion   |                    |                 |                |                                               |
| Addition     |                    |                 |                |                                               |

**STUDENT's** single word errors consisted of substitutions/omissions/distortions/additions. **STUDENT's** single word errors were compared to the state of Missouri's normative data for sound acquisition. The state of Missouri's normative data for sound acquisition suggests that the **X** phonemes are typically acquired by **X** years of age. **STUDENT's** word production of these phonemes was not considered developmentally appropriate at **STUDENT's** chronological age level of **X** years, **X** months. The evaluating speech-language pathologist determined that **STUDENT's** errors are not the result of dialectal differences or second language influence.
