Venables,2017-02-09 Cities in Sub Saharan Africa are experiencing rapid population growth Yet their economic growth has not kept pace Why One factor might be low capital investment due in part to Africa s relative poverty Other regions have reached similar stages of urbanization at higher per capita GDP This study however identifies a deeper reason African cities are closed to the world Compared with other developing cities cities in Africa produce few goods and services for trade on regional and international marketsTo grow economically as they are growing in size Africa s cities must open their doors to the world They need to specialize in manufacturing along with other regionally and globally tradable goods and services And to attract global investment in tradables production cities must develop scale economies which are associated with successful urban economic development in other regions Such scale economies can arise in Africa and they will if city and country leaders make concerted efforts to bring agglomeration effects to urban areas Today potential urban investors and entrepreneurs look at Africa and see crowded disconnected and costly cities Such cities inspire low expectations for the scale of urban production and for returns on invested capital How can these cities become economically dense not merely crowded How can they acquire efficient connections And how can they draw firms and skilled workers with a more affordable livable urban environment From a policy standpoint the answer must be to address the structural problems affecting African cities Foremost among these problems are institutional and regulatory constraints that misallocate land and labor fragment physical development and limit productivity As long as African cities lack functioning land markets and regulations and early coordinated infrastructure investments they will remain local cities closed to regional and global markets trapped into producing only locally traded goods and services and limited in their economic growth      **Social dilemmas, institutions,**

**and the evolution of cooperation** Ben Jann,Wojtek Przepiorka,2017-09-11 The question of how cooperation and social order can evolve from a Hobbesian state of nature of a war of all against all has always been at the core of social scientific inquiry Social dilemmas are the main analytical paradigm used by social scientists to explain competition cooperation and conflict in human groups The formal analysis of social dilemmas allows for identifying the conditions under which cooperation evolves or unravels This knowledge informs the design of institutions that promote cooperative behavior Yet to gain practical relevance in policymaking and institutional design predictions derived from the analysis of social dilemmas must be put to an empirical test The collection of articles in this book gives an overview of state of the art research on social dilemmas institutions and the evolution of cooperation It covers theoretical contributions and offers a broad range of

examples on how theoretical insights can be empirically verified and applied to cooperation problems in everyday life By bringing together a group of distinguished scholars the book fills an important gap in sociological scholarship and addresses some of the most interesting questions of human sociality
