To Numerical Computation, An (Second Edition) Wen Shen, 2019-08-28 This book serves as a set of lecture notes for a senior undergraduate level course on the introduction to numerical computation which was developed through 4 semesters of teaching the course over 10 years. The book requires minimum background knowledge from the students including only a three semester of calculus and a bit on matrices. The book covers many of the introductory topics for a first course in numerical computation which fits in the short time frame of a semester course. Topics range from polynomial approximations and interpolation to numerical methods for ODEs and PDEs. Emphasis was made more on algorithm development, basic mathematical ideas behind the algorithms, and the implementation in Matlab. The book is supplemented by two sets of videos available through the author's YouTube channel. Homework problem sets are provided for each chapter, and complete answer sets are available for instructors upon request. The second edition contains a set of selected advanced topics written in a self-contained manner suitable for self-learning or as additional material for an honored version of the course. Videos are also available for these added topics.
