Smart Electric and Hybrid Vehicles Mohd Tariq, Arif I. Sarwat, 2024-11-21 Thorough reference on technologies designs and strategies for electric and hybrid electric vehicles featuring contributions from international experts Designed for readers who need to review different types of electric and hybrid vehicle designs and strategies in a single book *Smart Electric and Hybrid Vehicles Advancements in Materials Design Technologies and Modeling* provides a broad overview of the field with additional resources to explore individual topics in greater depth Abstracts case studies references to key data and relevant numerical simulations are included throughout the text to aid in reader comprehension This book introduces the global landscape of hybrid and electric vehicles covering the available technologies from both a mechanical and electrical engineering perspective presenting mathematical aspects of modeling and analysis and surveying emerging trends and economic impacts It also explains all fundamentals regulations policies perceptions and market competition aspects of intelligent electric vehicles as well as how smart electric and hybrid vehicles can be utilized to reduce harmful emissions and reliance on fossil fuels over the lifecycle of a vehicle Edited by a team of highly qualified academics with contributions by an array of international experts *Smart Electric and Hybrid Vehicles Advancements in Materials Design Technologies and Modeling* includes information on Electric machine and inverter designs maximum speed considerations component cooling power density and material performance Battery systems fuel cells plug in vehicles mechanical drives and storage systems and the role of power electronics tools The impact of trends and technologies like AI machine vision and digital twins as well as related cyber security considerations Optimization of manufacturing waste charging stations sensing control road trajectory prediction and navigation systems Electrical interfaces to protect against electric shock and cost effectiveness compared to gasoline powered vehicles *Smart Electric and Hybrid Vehicles Advancements in Materials Design Technologies and Modeling* is an essential reference on the subject for mechanical engineers industrial engineers and academic researchers working in the automotive sector It is also an ideal learning resource for post graduate students in the automotive field

An Integrated Formal Task Specification Method for Smart Environments Maik Wurdell, 2011 This thesis is concerned with the development of interactive systems for smart environments One of the characteristic of smart environments is the need to support different interaction paradigms at runtime On the one hand interaction is performed explicitly the user performs an action in order to interact with the system e g pressing a button to adjust the light On the other hand actions of the user are interpreted by the smart environment even though they have not been performed primarily to interact with the system implicit interactions e g walking to the speaker's desk to give a talk A smart environment tries to infer those interactions to assist the user in her work e g display slides at the projection canvas Both interaction paradigms originate from different research fields and are currently treated independently although implicit and explicit interaction mutually influence each other and occur interleaved The thesis introduces a task modeling language in order to cope with the

given requirements of smart environments which can be used to perform interaction development for smart environments in a model based fashion for both interaction paradigms **Smart Strategies for Buying a Car** Daniel E.

Human-Centered Services Computing for Smart Cities Yohei Murakami, Kosaku Kimura, 2024-05-04 This open access book compiles seven monographs from researchers at the forefront of services computing and artificial intelligence for smart cities. This is structured into three thematic parts: service composition, big data analysis, and service integration for smart cities. The first part describes service compositions for smart cities where interaction between services and the physical world including humans is paramount, unlike services on the Web and clouds. The second part addresses the challenges of big data analytics in smart cities with a focus on privacy-preserving methodologies. The third part reports human-centered service integration for applications in smart cities.
