

Epic Tip Sheet: Ambulatory Handoff Smart Text

Purpose: The handoff smart text is a tool available in EPIC to assist staff in documenting information about the patient that will be helpful in patient movement or transition to next level of care.

Step #1: Click On Rooming tab within your patient's chart and then Click on Sending Handoff, complete in this field the nurse you are calling to complete your handoff. This would need to be done first if you want it to pull into your handoff note OR you could "refresh" your handoff note before signing.

The screenshot shows the 'Rooming' tab selected in the top navigation bar. Below it, a grid of options is displayed. The 'Sending Handoff' option is highlighted with a red box, and a red arrow points to it from the right.

The 'Sending Handoff' dialog box is shown. It has a title bar 'Sending Handoff' and several checkboxes: 'Responsible', 'Create Note', 'Main Manager', 'Show Row Info', 'Show Last Field Value', and 'Show Details'. Below these, the 'Report Given To' field is highlighted with a red box, containing the text 'Fill in nurses name you are giving report to'. At the bottom are buttons for 'Previous', 'Next', 'Close', and 'Cancel'.

Step #2: Open a new progress note

Step #3: Click on Insert SmartText box at the top of the progress note

The screenshot shows the 'My Note Progress Notes' interface. At the top, there are icons for lock, share, email, and other actions. Below these, there is a section for 'Cosign Required' and a toolbar with various icons. The 'Insert SmartText' button is highlighted with a red box, and a red arrow points to it from the right.

Data-Based Radiation Oncology - Design of Clinical Trials Kerstin A. Kessel, Anne W. Lee, Søren M. Bentzen, Bhadrasain Vikram, Fridtjof Nuesslin, Stephanie E. Combs, 2018-04-12 In radiation oncology as in many other specialties clinical trials are essential to investigate new therapy approaches Usually preparation for a prospective clinical trial is extremely time consuming until ethics approval is obtained To test a new treatment usually many years pass before it can be implemented in the routine care During that time already new interventions emerge new drugs appear on the market technical physical innovations are being implemented novel biology driven concepts are translated into clinical approaches while we are still investigating the ones from years ago Another problem is associated with molecular diagnostics and the growing amount of tumor specific biomarkers which allows for a better stratification of patient subgroups On the other side this may result in a much longer time for patient recruiting and consequently in larger multicenter trials Moreover all of the relevant data must be readily available for treatment decision making treatment as well as follow up and ultimately for trial evaluation This challenges even more for agreed standards in data acquisition quality and management How could we change the way currently clinical trials are performed in a way they are safe and ethically justifiable and speed up the initiation process so we can provide new and better treatments faster for our patients Further while we rely on various quantitative information handling distributed large heterogeneous amounts of data efficiently is very important Thus data management becomes a strong focus A good infrastructure helps to plan tailor and conduct clinical trials in a way they are easy and quickly analyzable In this research topic we want to discuss new ideas for intelligent trial designs and concepts for data management
