

THE SNORK LAB: A TRANSCRIPTION AND TRANSLATION ACTIVITY

Introduction: In this activity, you will transcribe and translate the DNA sequence of a fictitious organism called the Snork! These mysterious organisms live on the planet Dee Dee in a distance solar system. Snorks only have one chromosome with ten genes on it, which is much simpler than the 46 chromosomes us humans have! Your task is to analyze the DNA of one of the four different snorks by transcribing the DNA into mRNA, then translating the mRNA codons to the amino acid sequence that will make the specified protein for each of the ten genes. After you will draw your snork based on the phenotypes (the physical characteristics) that each amino acid sequence coded for and see your snork come to life!
