Background: The purpose of this study was to determine the prevalence of and risk factors for the presence of *Salmonella* in the feces of dairy cattle. **Methods:** A total of 1,000 dairy cattle from 100 farms in the United States were sampled for fecal *Salmonella* by using a modified enrichment and culture protocol. **Results:** The prevalence of *Salmonella* in the feces of dairy cattle was 1.2%. The prevalence of *Salmonella* was significantly higher in dairy cattle from farms that had a history of *Salmonella* infection (1.8%) compared to those from farms that had no history of *Salmonella* infection (0.5%). The prevalence of *Salmonella* was also significantly higher in dairy cattle from farms that had a history of *Salmonella* infection in the last 12 months (1.5%) compared to those from farms that had no history of *Salmonella* infection in the last 12 months (0.5%). **Conclusions:** The prevalence of *Salmonella* in the feces of dairy cattle is low, but it is higher in dairy cattle from farms that have a history of *Salmonella* infection. The prevalence of *Salmonella* in the feces of dairy cattle is also higher in dairy cattle from farms that have a history of *Salmonella* infection in the last 12 months.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

100

Abstract
The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health of sedentary, middle-aged men. The program consisted of three sessions per week, each lasting 45 minutes. The first session was a warm-up, the second was a cardiovascular workout, and the third was a strength training session. The results showed that the men who participated in the program showed significant improvements in their physical fitness and health. Specifically, their heart rate, blood pressure, and cholesterol levels all decreased, while their endurance and muscle strength increased. These findings suggest that a 12-week training program can be an effective way to improve the physical fitness and health of sedentary, middle-aged men.

[illegible]
