C1 Rates of Change

"SmartMaths analysis based on the average contribution to Extension 1 exams since 2000"

HISTORICAL CONTRIBUTION

- C1 Rates of Change has contributed 4.0% per new syllabus Ext1 exam since it was introduced in 2000.
- This topic has been split into three sub-categories for analysis purposes which are: 1-Growth and Decay (3.27%), 2-Motion and Time (0.7%), and 3-Related Rates of Change (0.4%).
- This analysis looks at Related Rates of Change.

HSC ANALYSIS - What to expect and common pitfalls

- Related Rates of Change (3.4%) has been examined in 2 out of 4 new syllabus exams, below in the longer answer section.
- Allocated marks in new syllabus exams are below this topic's historical average. Notwithstanding this, effective revision should include high mark "old syllabus" examples which are well represented in the database.
- 2023 Ext1 12a combined this topic with differential equations in an extremely challenging "must revise" question.
- The toughest examination of this topic was between 2011-2013 where sub-50% mean marks resulted each year. Any revision should include these examples.
- The most popular underlying subject matter of recent past questions is earth rotating areas/volumes (2 times) and Pythagoras (twice) (4 times).
- Markov's comments have flagged that students can often achieve half-marks by simply stating a correct chain rule and that students who draw diagrams in their solution are more successful. Good advice. Follow it.
- Pitfalls: The use of non-right angled trig in this context was examined in 2012 and poorly answered. Not tested again since and worthy of a minute focus.
- If a constant rate of change is established, students have struggled with follow up questions in 2013 Ext1 12a and 2000 Ext1 15a. A red-flagged knowledge gap worthy of attention.

4. Calculus, EXT1* C1 2013 HSC 10 MC

A particle is moving along the x -axis. The displacement of the particle at time t seconds is s metres.

At a certain time, $s = -3 \text{ m s}^{-1}$ and $\frac{ds}{dt} = 2 \text{ m s}^{-2}$.

Which statement describes the motion of the particle at that time?

- The particle is moving to the right with increasing speed.
- The particle is moving to the left with increasing speed.
- The particle is moving to the right with decreasing speed.
- The particle is moving to the left with decreasing speed.

A tank is initially full. It is drained so that at time t seconds the volume of water, V , in litres, is given by

$$V = 50 \left(1 - \frac{t}{100} \right)^2 \quad \text{for } 0 \leq t \leq 100$$

- How much water was initially in the tank? (1 mark)
- After how many seconds was the tank completely full? (1 mark)
- At what rate was the water draining out the tank when it was one-quarter full? (2 marks)

6. Calculus, EXT1 C1 2019 HSC 12a

Distance A is inversely proportional to distance B such that $A = \frac{8}{B}$ where A and B are measured in metres. The two distances vary with respect to time. Distance B is increasing at a rate of 0.2 m s^{-1} .

What is the value of $\frac{dA}{dt}$ when $A = 12$? (2 marks)

7. Calculus, EXT1 C1 EQ-Bank 1

A particle is moving along the x -axis with a velocity, u , in metres per second at t seconds, is given by the function

$$u = \sqrt{5t + 4t^2} - t^2$$

Find the acceleration of the particle when $t = 3$. (2 marks)

In a theme park ride, a chair is released from a height of 110 metres and falls vertically. Magnetic brakes are applied when the velocity of the chair reaches -20 metres per second.

The height of the chair at time t seconds is h metres. The acceleration of the chair is given by $\frac{dh}{dt} = -20$ at the release point, $t = 0$, $h = 110$ and $\frac{dh}{dt} = 0$.

i. Using calculus, show that $h = -5t^2 + 110$. (2 marks)

ii. How far has the chair fallen when the magnetic brakes are applied? (2 marks)

9. Calculus, EXT1 C1 2004 HSC 3c

A ferry wheel consists of a floating pontoon linked to a jetty by a 4 metre long walkway. Let A metres be the difference in height between the top of the pontoon and the top of the jetty and let s metres be the horizontal distance between the pontoon and the jetty.

i. Find an expression for s in terms of A . (2 marks)

When the top of the pontoon is 1 metre lower than the top of the jetty, the tide is rising at a rate of 0.3 metres per hour.

ii. At what rate is the pontoon moving away from the jetty? (2 marks)

Bird's Basic Engineering Mathematics John Bird, 2021-02-28 Now in its eighth edition Bird's Basic Engineering Mathematics has helped thousands of students to succeed in their exams. Mathematical theories are explained in a straightforward manner supported by practical engineering examples and applications to ensure that readers can relate theory to practice. Some 1 000 engineering situations/problems have been flagged up to help demonstrate that engineering cannot be fully understood without a good knowledge of mathematics. The extensive and thorough coverage makes this a great text for introductory level engineering courses such as for aeronautical construction, electrical, electronic, mechanical, manufacturing engineering and vehicle technology including for BTEC First National and Diploma syllabuses, City Guilds Technician Certificate and Diploma syllabuses and even for GCSE revision. Its companion website provides extra materials for students and lecturers including full solutions for all 1 700 further questions, lists of essential formulae, multiple choice tests and illustrations as well as full solutions to revision tests for course instructors.

Science and Mathematics for Engineering John Bird, 2019-10-08 A practical introduction to the engineering science and mathematics required for engineering study and practice. Science and Mathematics for Engineering is an introductory textbook that assumes no prior background in engineering. This new edition covers the fundamental scientific knowledge that all trainee engineers must acquire in order to pass their examinations and has been brought fully in line with the compulsory science and mathematics units in the new engineering course specifications. A new chapter covers present and future ways of generating electricity, an important topic. John Bird focuses upon engineering examples enabling students to develop a sound understanding of engineering systems in terms of the basic laws and principles. This book includes over 580 worked examples, 1300 further problems, 425 multiple choice questions with answers and contains sections covering the mathematics that students will require within their engineering studies: mechanical applications, electrical applications and engineering systems. This book is supported by a companion website of materials that can be found at www.routledge.com/bird. This resource includes fully worked solutions of all the further problems for students to access and the full solutions and marking schemes for the revision tests found within the book for instructor use. In addition, all 447 illustrations will be available for downloading by lecturers.

Finite Mathematics, Models, and Structure William J. Adams, 2009-02-16 Still another book on finite math. Why hasn't everything that should have been said been said? No, I would argue. The shortcoming that troubles me most about the books I am familiar with is their failure to provide perspective on what math technique and the use of technology can do for us and its limitations. This can only be addressed through vigorous and sustained use of the mathematical modeling perspective, which is a hallmark of this book's exposition. A point continually stressed is that reaching a mathematical answer to a problem is not the end of the story. It is in a sense the end of a chapter but the next chapter is

concerned with questions about whether and how the mathematical answer should be implemented Also addressed is the question of what to consider when more than one answer is obtained for a problem
