

Unit 3 Study Guide

Appendicular Division:

The appendicular skeleton includes the bones of the upper extremities (arms, forearms, and hands), the pectoral (shoulder) girdle, the pelvic (hip) girdle, and the bones of the lower extremities (thigh, knee, leg, and foot). Its components are outside the body main axis.

The bones of the upper extremities are the **humerus**, **ulna**, **radius**, **carpals** (wrist bones), **metacarpals** (hand bones), and **phalanges** (finger bones). The humerus in the arm articulates with the scapula at the shoulder joint and with the ulna and radius at the elbow. The radius and ulna in the forearm articulate with the carpals at the wrist. The ulna articulates with the humerus and forms the elbow. The carpals are small, flat, irregularly shaped wrist bones. They articulate with the metacarpals in the hand. The metacarpals articulate with the phalanges.

In the pelvic girdle are two hip bones. Each coxa (hip bone) forms from fused bones. The two coxae, sacrum, and coccyx form the pelvis, a bowl-shaped cavity that supports and protects many abdominal organs. The three fused bones of each coxa are the ilium, ischium, and pubis.

Forensic Archaeology W. J. Mike Groen, Nicholas Márquez-Grant, Rob Janaway, 2015-02-17 Forensic archaeology is mostly defined as the use of archaeological methods and principles within a legal context However such a definition only covers one aspect of forensic archaeology and misses the full potential this discipline has to offer This volume is unique in that it contains 57 chapters from experienced forensic archaeological practitioners working in different countries intergovernmental organisations or NGO s It shows that the practice of forensic archaeology varies worldwide as a result of diverse historical educational legal and judicial backgrounds The chapters in this volume will be an invaluable reference to forensic archaeologists forensic anthropologists humanitarian and human rights workers forensic scientists police officers professionals working in criminal justice systems and all other individuals who are interested in the potential forensic archaeology has to offer at scenes of crime or places of incident This volume promotes the development of forensic archaeology worldwide In addition it proposes an interpretative framework that is grounded in archaeological theory and methodology integrating affiliated behavioural and forensic sciences **Manual of Forensic Taphonomy** James T. Pokines, Ericka N. L'Abbe, Steven A. Symes, 2021-12-30 The main goals in any forensic skeletal analysis are to answer who is the person represented individualization how that person died trauma pathology and when that person died the postmortem interval or PMI The analyses necessary to generate the biological profile include the determination of human nonhuman or nonosseous origin the minimum number of individuals represented age at death sex stature ancestry perimortem trauma antemortem trauma osseous pathology odontology and taphonomic effects the postmortem modifications to a set of remains The Manual of Forensic Taphonomy Second Edition covers the fundamental principles of these postmortem changes encountered during case analysis Taphonomic processes can be highly destructive and subtract information from bones regarding their utility in determining other aspects of the biological profile but they also can add information regarding the entire postmortem history of the remains and the relative timing of those effects The taphonomic analyses outlined provide

guidance on how to separate natural agencies from human caused trauma These analyses are also performed in conjunction with the field processing of recovery scenes and the interpretation of the site formation and their postdepositional history The individual chapters categorize these alterations to skeletal remains illustrate and explain their significance and demonstrate differential diagnosis among them Such observations may then be combined into higher order patterns to aid forensic investigators in determining what happened to those remains in the interval from death to analysis including the environment s in which the remains were deposited including buried terrestrial surface marine freshwater or cultural contexts Features Provides nearly 300 full color illustrations of both common and rare taphonomic effects to bones derived from actual forensic cases Presents new research including experimentation on recovery rates during surface search timing of marine alterations trophy skulls taphonomic laboratory and field methods laws regarding the relative timing of taphonomic effects reptile taphonomy human decomposition and microscopic alterations by invertebrates to bones Explains and illustrates common taphonomic effects and clarifies standard terminology for uniformity and usage within in the field While the book is primarily focused upon large vertebrate and specifically human skeletal remains it effectively synthesizes data from human ethological geological paleontological paleoanthropological archaeological artifactual and zooarchaeological studies Since these taphonomic processes affect other vertebrates in similar manners The Manual of Forensic Taphonomy Second Edition will be invaluable to a broad set of forensic and investigative disciplines **Finley's Interactive Cadaveric Dissection Guide** Claudia R. Senesac, PT, PHD, PCS and Mark Bishop, PT, PHD, *Finley's Interactive Cadaveric Dissection Guide* Claudia R. Senesac, Mark Bishop, 2009-08-17 [Manual of Forensic Taphonomy](#) James Pokines, Steven A. Symes, 2013-10-08 Forensic taphonomy is the study of the postmortem changes to human remains focusing largely on environmental effects including decomposition in soil and water and interaction with plants insects and other animals While other books have focused on subsets such as forensic botany and entomology Manual of Forensic Taphonomy is the first update of *Manual of Human Osteology* Andrew Francis Dixon, 1912 **A Companion to Paleopathology** Anne L. Grauer, 2016-01-19 A Companion to Paleopathology offers a comprehensive overview of this rapidly growing sub field of physical anthropology Presents a broad overview of the field of paleopathology integrating theoretical and methodological approaches to understand biological and disease processes throughout human history Demonstrates how paleopathology sheds light on the past through the analysis of human and non human skeletal materials mummified remains and preserved tissue Integrates scientific advances in multiple fields that contribute to the understanding of ancient and historic diseases such as epidemiology histology radiology parasitology dentistry and molecular biology as well as archaeological archival and historical research Highlights cultural processes that have an impact on the evolution of illness death and dying in human populations including subsistence strategies human environmental adaptations the effects of malnutrition differential access to resources and interpersonal and intercultural violence *Laboratory Manual and Study Guide for Integrated Science for*
