1. The bonds of cohesiveness within the solid will be a liquid, and the liquid will be a gas.
2. The solid would lose the water drops because the particles in a solid are bound tightly together. The drops of the liquid will spread around and later evaporate because the particles in a liquid have spread out more. The drops of the liquid would continue to change and spread outwards because the particles in a gas move apart in many different directions.
3. Since the bonds of cohesiveness within the volume would stop the water. The volume of the liquid will eventually stop the water. The volume of the liquid would expand to fill the area of the larger container because the particles would spread apart.
