Section: Water Use and Management

Read the passage below and answer the questions that follow.

Industry accounts for 19 percent of water used in the world. Water is used to manufacture goods, to dispose of waste, and to generate power. The amount of water needed to manufacture everyday items can be astounding. For instance, nearly 1,000 L of water are needed to produce 1 kg of aluminum, and almost 500,000 L of water are needed to manufacture a car. Vast amounts of water are required to produce computer chips and semiconductors.

Most of the water that is used in industry is used to cool power plants. Power-plant cooling systems usually pump water from a surface water source such as a river or lake, carry the water through pipes in a cooling tower, and then pump the water back into the source. The water that is returned is usually warmer than the source, but it is generally clean and can be used again.

IDENTIFYING MAIN IDEAS

One reading skill is the ability to identify the main idea of a passage. The main idea is the main focus or key idea. Frequently, a main idea is accompanied by supporting information that offers detailed facts about main ideas.

In the space provided, write the letter of the term or phrase that best completes each statement or best answers each question.

Consciousness and the Brain Gordon Globus, 2012-12-06 The relationship of consciousness to brain which Schopenhauer grandly referred to as the world knot remains an unsolved problem within both philosophy and science The central focus in what follows is the relevance of science from psychoanalysis to neurophysiology and quantum physics to the mind brain puzzle Many would argue that we have advanced little since the age of the Greek philosophers and that the extraordinary accumulation of neuroscientific knowledge in this century has helped not at all Increasingly philosophers and scientists have tended to go their separate ways in considering the issues since they tend to differ in the questions that they ask the data and ideas which are provided for consideration their methods for answering these questions and criteria for judging the acceptability of an answer But it is our conviction that philosophers and scientists can usefully interchange at least to the extent that they provide constraints upon each other's preferred strategies and it may prove possible for more substantive progress to be made Philosophers have said some rather naive things by ignoring the extraordinary advances in the neurosciences in the twentieth century The skull is not filled with green cheese On the other hand the arrogance of many scientists toward philosophy and their faith in the scientific method is equally naive Scientists clearly have much to learn from philosophy as an intellectual discipline
