School Science Practical Work in Africa Umesh Ramnarain, 2020-06-01 School Science Practical Work in Africa presents the scope of research and practice of science practical work in African schools. It brings together prominent science educators and researchers from Africa to share their experience and findings on pedagogical innovations and research informed practices on school science practical work. The book highlights trends and patterns in the enactment and role of practical work across African countries. Practical work is regarded as intrinsic to science teaching and learning and the form of practical work that is strongly advocated is inquiry based learning which signals a definite paradigm shift from the traditional teacher dominated to a learner centered approach. The book provides empirical research on approaches to practical work, contextual factors in the enactment of practical work and professional development in teaching practical work. This book will be of great interest to academics, researchers and post graduate students in the fields of science education and educational policy.

**Some Developments in Research in Science and Mathematics in Sub-Saharan Africa** Lorna Holtman, 2008 Much attention in late developing countries is given to providing access to studies which allow school leavers to enter science and technology related careers. These programmes are driven by the belief that graduates will then substantially contribute to the developmental needs of their countries. But is providing access to institutions enough? Students in developing countries often come from school environments lacking in resources, human, physical and financial. This book in a number of chapters reviews research related to the crucial dimension of epistemological access to the disciplines of interest which students need as much as institutional access in order to improve their chances of success. A significant feature of this collection's research studies is that their empirical bases are highly localised, covering areas such as research methods, access, curriculum, instruction and assessment and the relevance of science and mathematics education in Zimbabwe, Uganda, Swaziland, South Africa, Namibia, Malawi, Ghana and Lesotho. This volume provides invaluable insights and will be of relevance to researchers, policy makers and lecturers interested in these research outcomes in Sub-Saharan Africa. It is the outcome of a doctoral research capacity
