

(b) Input area

The lower part of the screen contains the line the user is currently typing in. This line may be a command or a line of program; in the latter case it will begin with a line number (in the range 1 to 9999) and in the former case there should be no number, although zero in practice counts as "no number" here.

Somewhere in the line a "cursor" is displayed. This indicates two things: the position in the line where symbols will be inserted, and whether an unshifted alphabetic key will be treated as a keyword (eg "LIST") or a letter (eg "A"). The cursor is in the form of an inverse video  for keywords or  for letters.

Note that this cursor, although displayed in the line and occupying a character position on the screen, does not form part of the line and is ignored by anything interpreting the line.

A second symbol, similar in principle to the cursor, may also be displayed: this is in the form of an inverse video  and indicates that the line is not a syntactically correct BASIC statement. It is positioned such that the part to the left of it could be the beginning (or the whole) of a syntactically correct BASIC statement eg if "20 LET A = B + 5"

is input from left to right then,  symbol will be displayed at the end of

20 LET	and be absent from	2
20 LET A		20
20 LET A=		20 LET A=B
20 LET A=B+		20 LET A=B+5

In most cases the symbol is displayed as far to the right as is consistent with the above description; however there are a few circumstances where this is not quite so, for instance in

LET A=ASC("X")

although "LET A=ASC" is a syntactically correct statement (ASC here being an integer variable) the  is not displayed after "ASC" but rather before it. This is because "ASC(. . .)" has already been identified as a function call, but as no built-in function with the name "ASC" is available it is faulted. Having identified it as a function call, however, the computer does not then consider other possible parses.

The following keys are available to alter the input line:

- (i) single-character symbols: letters, digits, punctuation, etc the symbol is inserted to the left of the cursor.
