Visible Objects Control what s visible in your scene by hiding or unhiding layers

Foreground Depth Set the viewing plane depth at which you begin to see objects in your scene By default the foreground depth starts at the location of your camera but you can manually set a foreground depth using section cuts and clipping planes

Background Depth Set how deep into the model you want to see by using object masks or fog

Camera Perspective Position your camera to the view you want to see and configure your field of view and perspective settings
