

Answer:

Friction is a force that opposes motion in all contacted surfaces. This will occur with particles (eg. vehicles) experiencing its greatest opposing resistance when direction starts changing and sliding motion. Friction follows in the opposite direction from motion. But what acts (causing) sliding? Friction is the friction. Friction is the opposing motion.

1. Calculating Friction

In the illustration below, a force of 10 N is applied to an object. Friction is opposing.

Calculate the force of friction.

What are the forces of friction? (Friction is the opposing motion.)

Answer:

There is also a force of friction.

Answer:

$$\text{Friction force of } 10 \text{ N} = \mu \cdot F_{\text{normal}} = \mu \cdot F_{\text{applied}} = 10 \text{ N}$$

In this question:

• μ is the coefficient of friction.

• F_{normal} is the normal force.

• F_{applied} is the applied force (force pushing against).

Example: A block is sliding on a surface. The coefficient of friction is 0.2. What is the force of friction? (What is the force of friction?)

$$\begin{aligned} F_f &= \mu \cdot F_n \\ F_f &= 0.2 \cdot 10 \text{ N} \\ F_f &= 2 \text{ N} \end{aligned}$$

In addition, the force of friction is greater than 10 N.

2. Friction Forces

Friction forces oppose motion. Friction forces are the following way: When there is a force of friction, it is the force of friction. Friction forces are the force of friction.

1. A force of 10 N is applied to a surface. The coefficient of friction is 0.2. What is the force of friction? (What is the force of friction?)

Skill Sheet 6 2 Friction
