Diego, Miguel Muñoz Lecanda, 2019-10-26 This proceedings is based on the interdisciplinary workshop held in Madrid 5-9 March 2018 dedicated to Alberto Ibort on his 60th birthday. Alberto has greatly and significantly contributed to many fields of mathematics and physics always with highly original and innovative ideas. Most of Alberto's scientific activity has been motivated by geometric ideas, concepts and tools that are deeply related to the framework of classical dynamics and quantum mechanics. Let us mention some of the fields of expertise of Alberto Ibort: Geometric Mechanics, Constrained Systems, Variational Principles, Multisymplectic structures for field theories, Super manifolds, Inverse problem for Bosonic and Fermionic systems, Quantum Groups, Integrable systems, BRST Symmetries, Implicit differential equations, Yang Mills Theories, BiHamiltonian Systems, Topology Change and Quantum Boundary Conditions, Classical and Quantum Control, Orthogonal Polynomials, Quantum Field Theory and Noncommutative Spaces, Classical and Quantum Tomography, Quantum Mechanics on phase space, Wigner Weyl formalism, Lie Jordan Algebras, Classical and Quantum, Quantum to Classical transition, Contraction of Associative Algebras, contact geometry among many others. In each contribution one may find not only technical novelties but also completely new way of looking at the considered problems. Even an experienced reader reading Alberto's contributions on his field of expertise will find new perspectives on the considered topic. His enthusiasm is happily contagious for this reason he has had and still has very bright students wishing to elaborate their PhD thesis under his guidance. What is more impressive is the broad list of rather different topics on which he has contributed. **Physics Briefs**, 1994

Encyclopaedic Dictionary of Physics James Thewlis, 1961 **The Americana**, 1923 **The Encyclopedia Americana**, 1927 Engineering Education and Technological / Professional Learning Clara Viegas, Arcelina Marques, Gustavo R. Alves, Francisco José García-Peñalvo, 2019-12-16 The focus of this Special Issue is aimed at enhancing the discussion of Engineering Education particularly related to technological and professional learning. In the 21st century students face a challenging demand: they are expected to have the best scientific expertise but also highly developed social skills and qualities like teamwork, creativity, communication or leadership. Even though students and teachers are becoming more aware of this necessity, there is still a gap between academic life and the professional world. In this Special Edition Book the reader can find works tackling interesting topics such as educational resources addressing students' development of competencies, the importance of final year projects linked to professional environments and multicultural or interdisciplinary challenges.
