Wind Design Criteria for Field Shelters Llewelyn Williams,1975 This report presents a damage potential scale for storm winds other than tornadoes and hurricanes derived from storm damage reports in the NOAA monthly publication Storm Data by using threshold values in the scale Wind design criteria are proposed for the design of the Army functional system of field shelters An inherent advantage seen for the proposed criteria is that they are derived from storm winds most likely to be experienced in the field Since the scale is based on storm data from a region known for its tornado activity thunderstorm severity and cold front intensity and squall line passages the wind criteria probably pose as severe design conditions as might be expected in any operational area in the world Furthermore normal engineering practices are believed to have the flexibility to allow design changes for various regions of the world the criticalness of the shelter function and for different service life expectancies

Bluestein,2006 Tornadoes are the most violent magnificent and utterly unpredictable storms on earth reaching estimated wind speeds of 300 mph and leaving swaths of destruction in their wake In Tornado Alley Howard Bluestein draws on two decades of experience chasing and photographing tornadoes across the Plains to present a fascinating historical account of the study of tornadoes and the great thunderstorms that spawn them A century ago tornado warnings were so

unreliable that they usually went unreported Today despite cutting edge Doppler radar technology and computer simulation these storms remain remarkably difficult to study Leading scientists still conduct much of their research from the inside of a speeding truck and often contend with jammed cameras flash floods and windshields smashed by hailstones and flying debris Using over a hundred diagrams models and his own spectacular color photographs Bluestein documents the exhilaration of hair raising encounters with as many as nine tornadoes in one day as well as the crushing disappointment of failed expeditions and ruined equipment Most of all he recreates the sense of beauty mystery and power felt by the scientists who risk their lives to study violent storms For scientists amateur weather enthusiasts or anyone who s ever been intrigued or terrified by a darkening sky Tornado Alley provides not only a history of tornado research but a vivid look into the origin and effects of nature s most dramatic phenomena
