

The slide-mounted grinding attachment
serves for grinding of both external and internal surfaces and for obtaining a good surface finish and accurate geometric shape of the workpiece. The grinding spindle runs in high-precision ball bearings, being interchangeable for external and internal grinding and driven through a flat belt from an independent electric motor. A micrometer feeding attachment affords minimum feed of 0.01 mm (in. 0.00039) into the cut. The grinding wheel is balanced by means of a counterweight adjustable in the groove of the flange.

The taper turning attachment

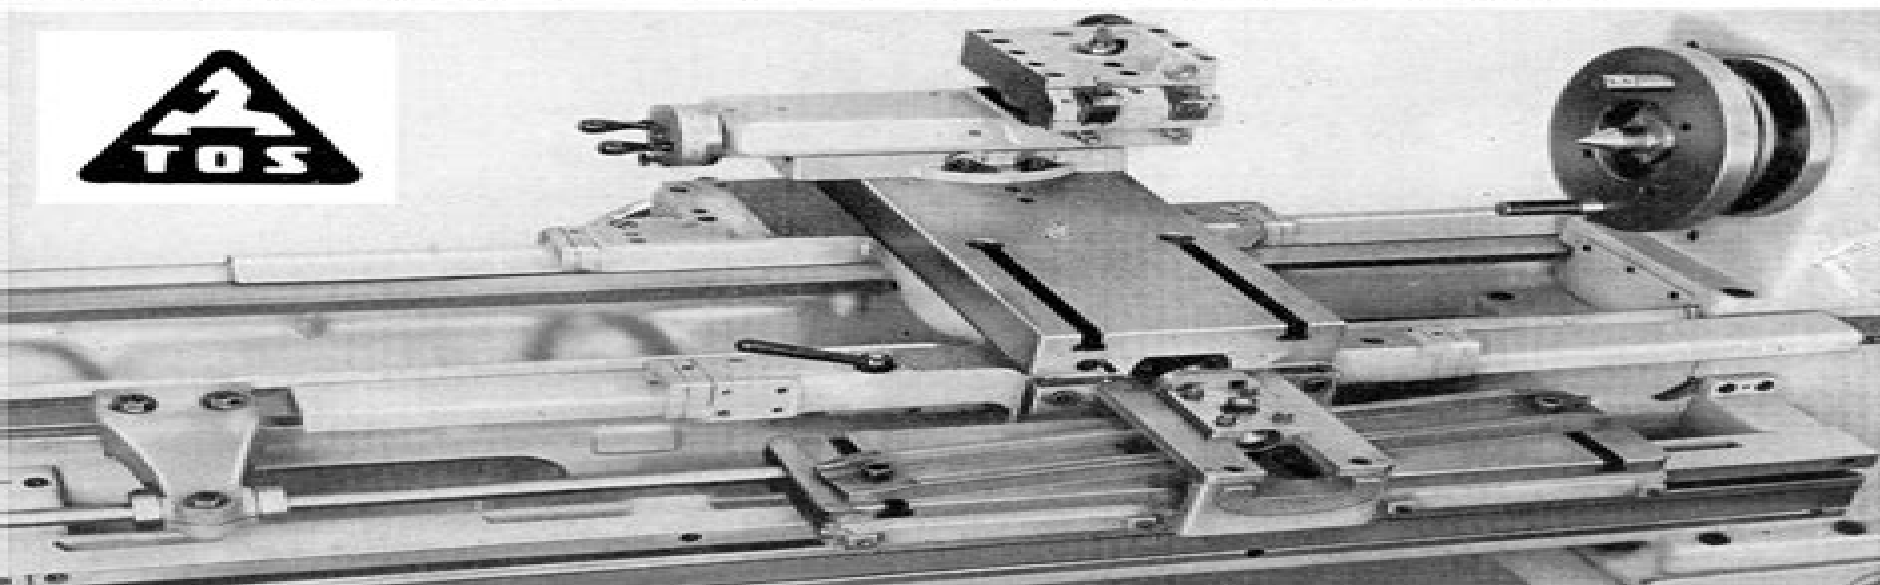

is an important supplement to a universal lathe for taper turning. It is attached to the rear of the machine. On the taper bar there is a scale for coarse adjustment of the taper; fine adjustments are effected by measurements for which a gauge is employed.

The system of trip dogs

enables the lengths for longitudinal turning of individual parts to be limited. When a power feed is employed, the resistance of trip dogs against a positive stop causes an automatic feed release. The trip dogs once positioned are secured against axial displacement by screws fastened in the thread of the supporting shaft.
