

## Aluminium Single Door Installation Guide

## Practice Your Skills

Planted this garden all this way through bottom's starting.

Check the size of the opening against the doors outer frame to ensure a good fit.

Ensure you have all components available -- oils, end caps, gaskets, packers etc

It is vital to ensure that the door is fitted level, plumb and square and that it is toe and hooked correctly. Failure to do this will mean the doors will not open or close correctly and the locking mechanism might not work.

Screw fix and seal the oil-end caps in position. Set the oil in the required position. Make sure that the oil is absolutely level.

The door can now be positioned on the sill and in the opening.

Use packers in the corners to hold the door in place and to ensure it remains level, plumb and square. To check the outer frame is square measure the diagonals. There should be no more than 1/8" difference between A and B.

3. Fix through the thermal break at the bottom into the sill (do not screw through the drain holes).

Standard Threshold on  $\text{C}_{\text{max}}$ 

The first fixing must always occur within 150mm of each corner and at no more than 600mm centres. Do not over-tighten fixings. Packers should be used around the fixings to prevent distortion of the frame. Foam can be used but it is not an alternative to proper fixing and care should be taken not to come into contact with the painted finish.

File this gutter insert into envelopes on both sides.

Fit the head of the outer frame into brickwork, or stage (above).

Double check the diagonals to make sure they are still equal.

Check that the doors are working correctly and operating smoothly.
