Full-Grown Plant

The full-grown plant has roots, a stem, leaves, and, often, flowers. The flowers have a fragrance and colors that attract bees and other insects. These insects know that they will be able to get food from the flower. As the insects drink the flower's nectar, a powdery substance called pollen sticks to their bodies. When they bring the pollen to other flowers, the plants have what they need to make seeds.

Bees are a very important part of the life cycle of many plants. Without bees, these plants would not make new seeds. For this reason, many people are trying to protect the bees of the world.
