Basics of Wellhead Control Panel (WHCP)

Basics of Wellhead Control Panel (WHCP) is a critical component of the wellhead system, responsible for monitoring and controlling the wellhead's operation. It is a complex system that integrates various sensors, actuators, and control logic to ensure the safe and efficient operation of the wellhead. The WHCP is typically located near the wellhead and is connected to the wellhead's control system. It is responsible for monitoring the wellhead's pressure, temperature, and flow rate, and for controlling the wellhead's valves and actuators. The WHCP is also responsible for detecting and responding to any abnormalities or faults in the wellhead's operation. This includes monitoring for leaks, overpressure, and other safety hazards. The WHCP is a critical component of the wellhead system, and its proper operation is essential for the safe and efficient operation of the wellhead.
