Environmental Management Accounting for Cleaner Production Stefan Schaltegger, Martin Bennett, Roger L. Burritt, Christine M. Jasch, 2008-10-10 Sustainability requires companies to develop in an economically environmentally and socially sustainable manner Corporate sustainable development in turn requires movement towards cleaner production In order to recognize the potential from cleaner production reduced costs and fewer environmental impacts through the reduced use of materials environmental management accounting EMA is a necessary information management tool Environmental Management Accounting for Cleaner Production reveals a set of tools for companies to collect evaluate and interpret the information they need to estimate their potential to use cleaner production to realize cost savings and to make the best decisions about the available cleaner production options EMA is therefore the key for driving environmental progress cost savings increased competitiveness and corporate sustainability through the means of cleaner production

Resources in Education ,1991 **INIS Atomindex** ,1983 *Free Radicals in Chemistry and Biology* Milan Lazar,1989-03-31 Elementary radical reactions are described in terms of fundamental knowledge of organic chemistry and chemical physics in this valuable reference text The complex radical processes of nonchain and chain mechanisms such as dimerization alkylation polymerization telomerization halogenation pyrolysis oxidation and combustion are complemented by reactions in chemical lasers and in the cosmos as well as by reactions in biological objects under normal or pathological metabolism The text also provides the synthesis of facts from various fields of research and involves mechanisms where free radicals appear either as main or side intermediates in one of the several alternatives of the reaction pathway Highlights include 38 tables and 39 figures **Frontiers of Free Radical Chemistry** William Pryor,2012-12-02 Frontiers of Free Radical Chemistry covers the proceedings of the 1979 symposium on Frontiers of Free Radical Chemistry held in Louisiana State University Chemistry Department supported by the Exxon Education Foundation The contributors discuss the mechanisms of hydrocarbon cracking oxidation processes inhibition and the theory of organic radical reactions halogenations and organic peroxide chemistry This book is organized into three parts encompassing 15 chapters Part I deals with the understanding of molecular and free radical mechanisms in predicting thermochemical data for radicals and molecules This part also describes the relationship between distortions of organic molecules and the reactions of pericyclic ionic and radical molecules Part II presents quantitative evaluations of gas phase reactions of carbynes and hydrocarbon pyrolysis and cracking Discussions on the reactions of free atoms and radicals in the chemistry of the stratosphere and natural troposphere with an emphasis on the ozone layer and its potential depletion by artificial pollutants are included in this part Part III explores the pertinent free radical reactions related to fuel research Petroleum chemists researchers and engineers will find this book invaluable *Free Radicals in Organic Synthesis* D. General Aspects of the Chemistry of Radicals Edited by Z B Alfassi Ben Gurion University of the Negev Israel Free radicals are used as reactive intermediates in a wide range of organic syntheses as well as playing an important role in biological systems and industrial processes Free radical chemistry is a rapidly developing area with applications not only in chemistry but also in processes related to the environment biology drug research and medicine General Aspects of the Chemistry of Radicals is an introductory book discussing methods of formation and detection of free radicals the rate of their reactions and their thermochemistry The book closely examines the reactivity of free radical reactions rate constants and temperature dependence important in predicting the behaviour of yet unstudied systems and validating reaction mechanisms General Aspects of the Chemistry of Radicals is written for researchers working in environmental and material sciences organic inorganic and physical organic chemistry It will also be of interest to biochemists and molecular biologists working with the effects of free radicals on living systems **Advances in Free Radical Chemistry** S.Z. Zard, 2000-01-31 This series is designed to provide a vehicle in which investigators who have demonstrated a high degree of competence in some aspect of free radical chemistry can present a particular area of interest The series encompasses a wide variety of topics which are of current interest **Half a Century of Free Radical Chemistry** Derek H. R. Barton, Sir Derek Barton, Shyamal I. Parekh, 1993-04-15 This book describes the experience over 25 years of the senior author with the chemistry of organic free radicals It begins with a mechanistic study of industrial importance on the pyrolysis of chlorinated alkanes It continues with a theory on the biosynthesis of phenolate derived alkaloids involving phenolate radical coupling There follows 20 years of practical work to prove the theory correct especially in the case of morphine alkaloids The book then describes the work on nitrile photolysis Barton reaction which involved the invention of new radical chemistry leading to a simple synthesis of the important hormone aldosterone There follows a description of the invention of an important new method for the deoxygenation of biologically important molecules especially sugars and nucleosides using radical chemistry applied to thiocarbonyl derivatives Some years later in a logical extension to carboxylic acids another new reaction was invented which provides carbon nitrogen oxygen and other radicals under mild conditions A final chapter summarizes recent applications of thiocarbonyl group derived radical reactions by other authors

Minisci, 1997-03-31 Our understanding of the quantitative aspects of free radical chemistry and the involvement of radicals in such areas as biology medicine the environment etc has developed spectacularly over recent years yet the various topics are

commonly discussed separately in specific meetings and specialised publications Free Radicals in Biology and Environment draws together two important areas of free radical chemistry using as a bridge the fundamental physical chemistry of free radicals spectroscopic detection of free radicals evaluation of absolute rate constants elucidation of mechanisms of free radical reactions and catalysis photochemical and radiation processes etc The most relevant topics covered are the EPR detection of radicals in biochemical systems and in pollutant formation and degradation oxidation processes in biology and in the troposphere radiation and induced damage and atmospheric pollutants arising from incomplete combustion Also covered are the chemistry and biochemistry of nitric oxide and peroxynitrite the chemistry and biochemistry of DNA radicals the role of radicals in myeloperoxidase lipoxygenase radicals and cardiovascular injury radiation and the fragmentation of cells and tissues *Free Radicals in Solution* Cheves Walling,1957 *Radical Chemistry* Michael John Perkins,2000 Another volume in the successful Oxford Chemistry Primers series Number 91 cover radicals reactive molecular fragments which may participate in chemical reactions and are frequently associated with disease but are now recognized to be important in polymer synthesis This text helps upper undergraduates understand the basics of radical chemistry in a modern context and how its is being used in organic synthesis mediators of many disease conditions and the control of enzyme action *The Chemistry of Free Radicals* Rayson L.
