Hearne, Brian Gardunia, Valentin Wimmer, Fernando H. Toledo, 2022-09-15 Genomic selection GS has been the most prominent topic in breeding science in the last two decades The continued interest is promoted by its huge potential impact on the efficiency of breeding Predicting a breeding value based on molecular markers and phenotypic values of relatives may be used to manipulate three parameters of the breeder's equation First the accuracy of the selection may be improved by predicting the genetic value more reliably when considering the records of relatives and the realized genomic relationship Secondly genotyping and predicting may be more cost effective than comprehensive phenotyping Resources can instead be allocated to increasing population sizes and selection intensity The third probably most important factor is time As shown in dairy cattle breeding reducing cycle time by crossing selection candidates earlier may have the strongest impact on selection

gain Many different prediction models have been used and different ways of using predicted values in a breeding program have been explored We would like to address the questions i How did GS change breeding schemes of different crops in the last 20 years ii What was the impact on realized selection gain iii What would be the best structure of a crop specific breeding scheme to exploit the full potential of GS iv What is the potential of hybrid prediction epistasis effect models deep learning methods and other extensions of the standard prediction of additive effects v What are the long term effects of GS vi Can predictive breeding approaches also be used to harness genetic resources from germplasm banks in a more efficient way to adapt current germplasm to new environmental challenges This Research Topic welcomes submissions of Original Research papers Opinions Perspectives Reviews and Mini Reviews related to these themes 1 Genomic selection statistical methodology 2 The optimal use of GS in breeding schemes 3 Practical experiences with GS selection gain long term effects negative side effects 4 Predictive approaches to harness genetic resources Concerning point 1 If an original research paper compares different methods empirically without theoretical considerations on when one or the other method should be better the methods should be compared with at least five different data sets The data sets should differ either in crop genotyping method or its source for instance from a breeding program or gene bank accessions Concerning point 2 Manuscripts addressing the use of GS in breeding schemes should illustrate breeding schemes that are run in practice General ideas about schemes that may be run in the future may be considered as Perspective articles Conflict of Interest statements Topic Editor Valentin Wimmer is affiliated to KWS SAAT SE Co KGaA Germany Topic Editor Brian Gardunia is affiliated to Bayer Crop Sciences and has a collaboration with AbacusBio and is an author on patents with Bayer Crop Sciences The other Topic Editors did not disclose any conflicts of interest Image credit CIMMYT reproduced under the CC BY NC SA 2 0 license

Understanding Selfies Piotr Sorokowski, Katarzyna Pisanski, Agnieszka Sorokowska, Nicola Bruno, 2018-04-27 In the year 2013 selfie was named word of the year by Oxford Dictionaries in recognition of dramatic changes in frequency prominence and register of the term This drastic increase in selfie taking was spurred by two factors The first was the advent of smartphones equipped with front cameras and preview screens that made it easy to compose a photographic self portrait by a process of deliberately exploring one's image choosing a pose and finally taking the picture The second key change contributing to the rise of the selfie age was the increasing availability of internet connections It is estimated that about 50% of the world population has access to the internet today 2018 <https://www.internetworldstats.com> At the end of the past century this percentage was a mere 1% The growth of the internet infrastructure simultaneously spurred the development of social network applications such as Facebook Twitter Snapchat and Instagram providing accessible media for sharing photographs including photographic self portraits However despite their tremendous reach and popularity selfies have so far received relatively little attention by the scientific community especially within psychology Thus we proposed a Frontiers in Psychology Research Topic to expand empirical and theoretical work on the massively popular yet scientifically unexplored phenomenon of the selfie The articles published in this eBook offer a multifaceted insight into current scholarly work on this topic
