**Q.** Why does pressure increase as depth below water increases?

**A.** The amount of water exerting pressure increases.

**1.** Snowshoes distribute a person's weight over the large area of the snowshoes, resulting in less downward pressure on the snow compared to regular shoes. With less downward pressure, the person doesn't sink into the snow.

Sample causes:

Weight is greater than buoyant force.

The object's density is greater than the density of the fluid in which it is placed.

The object is compressed and becomes denser than the fluid.

**4.** Left to right: b, a, c

**5.** false

**6.** more

**7.** Helium is less dense than air, and objects rise in air if their densities are less than air's density. A balloon filled with air does not rise because the density of the air inside the balloon is not less than the outside air's density.

**8.** By pumping water out, the submarine's overall mass decreases. Since its volume remains the same, its density decreases when its mass decreases.

**9.** The air reduces the ship's overall density, and so allows it to float on the water's surface.
