**Fundamental Analysis, Behavioral Finance and Technical Analysis on the Stock Market** Timo Schlichting, 2009-07-31 Diploma Thesis from the year 2008 in the subject Business economics Investment and Finance grade 2.0 University of Applied Sciences Essen language English abstract Historically considered fundamental and technical analyses have always competed often leading to advocates that ideologically judge either a fundamental analysis or technical analysis to be the one and only analyzing concept Behavioral finance is a relatively new scientific approach to explain psychological anomalies on the stock market but is also more and more often considered to be able to compete with both fundamental and technical analyses Still do these analysis concepts really compete in practice or could they actually supplement each other with their respective strengths Taking the turbulent stock market phases as well as these unanswered questions about fundamental analysis behavioral finance and the technical analysis into consideration this thesis ultimately pursues two general objectives Firstly fundamental analysis behavioral finance and technical analysis should be scientifically examined in terms of their premises analysis approaches empirical evidences as well as strengths and weaknesses Secondly it should be examined as to whether the fundamental analysis behavioral finance and technical analysis have theoretical and practical synthesis capabilities that could be used for developing a synthesis concept The synthesis concept should combine the respective strengths and eliminate the respective weaknesses of each of the three analysis concepts Fundamental analysis behavioral finance and technical analysis are examined in detail Empirical studies should prove if and by which approaches the analysis concept is able to predict future stock prices In order to be able to develop a synthesis concept each analysis concept is evaluated by a SWOT analysis pursuing the objective of determining the respective strengths weaknesses opportunities and threats of the

**Alternative Analysis Methods Applied to the German Stock Market** Timo Schlichting, 2009-07-24 Seminar paper from the year 2008 in the subject Business economics Investment and Finance grade 1.0 University of Applied Sciences Essen language English abstract The price movements of stocks are the result of complex interdependencies due to a vast number of influencing factors such as fundamental and psychological factors are expressed in the expectations and the behavior of the stock market participants To cope with this complexity and to derive an applicable asset strategy analysts distinguish particularly between two dominant analysis methods in practice the Fundamental and the Technical Analysis which have recently been supplemented by the approach of Behavioral Finance With reference to a strict interpretation of the theoretical assumptions of the Fundamental as well as the Technical Analysis these

two concepts are mutually exclusive As a result of this there are a vast number of analysts who either acknowledge the Fundamental Analysis while denying the Technical Analysis and vice versa The Fundamentals criticize that the technical approach has a lack in academic foundation and is therefore similar to a kind of reading tea leaves whereas the Technicals are convinced that the Fundamental Analysis is not able to generate an advantage by analyzing the fundamental value drivers of a stock because those are already reflected by the current market prices In practice the Fundamental Analysis seems to have its weaknesses particularly during extreme market phases e g during the New Economy bubble at the end of the nineties in which the psychology of the market participants gains in impact At the same time the fundamental aspects are seemingly neglected Furthermore the fundamental approach seems to have improvement capabilities particularly in terms of timing Psychological aspects of the market participants are at least indirectly included within the Technical Analysis which could be particularly used for timing decisions as well Nevertheless it has its weaknesses too e g it does not provide clearly defined interpretation rules for its various numbers of chart patterns and technical indicators Behavioral Finance seems to have its existence authority in practice as well due to decisions in stock markets made by human beings who do not always behave total rationally All these aspects lead to the master question if the two alternative analysis methods Technical Analysis and Behavioral Finance can deliver any useable supplements towards the Fundamental Analysis in terms of their practical application

by analyzing the fundamental value drivers of a stock because those are already reflected by the current market prices. In practice, the Fundamental Analysis seems to have its weaknesses particularly during extreme market phases e.g. during the New Economy bubble at the end of the nineties in which the psychology of the market participants gains in impact. At the same time, the fundamental aspects are seemingly neglected. Furthermore, the fundamental approach seems to have improvement capabilities particularly in terms of timing. Psychological aspects of the market participants are at least indirectly included within the Technical Analysis which could be particularly used for timing decisions as well.

**N** Stock Market Modeling and Forecasting Xiaolian Zheng, Ben M. Chen, 2013-04-05. Stock Market Modeling and Forecasting translates experience in system adaptation gained in an engineering context to the modeling of financial markets with a view to improving the capture and understanding of market dynamics. The modeling process is considered as identifying a dynamic system in which a real stock market is treated as an unknown plant and the identification model proposed is tuned by feedback of the matching error. Like a physical system, a financial market exhibits fast and slow dynamics corresponding to external such as company value and profitability and internal forces such as investor sentiment and commodity prices respectively. The framework presented here consisting of an internal model and an adaptive filter is successful at considering both fast and slow market dynamics. A double selection method is efficacious in identifying input factors influential in market movements revealing them to be both frequency and market dependent. The authors present work on both developed and developing markets in the shape of the US, Hong Kong, Chinese and Singaporean stock markets. Results from all these sources demonstrate the efficiency of the model framework in identifying significant influences and the quality of its predictive ability. Promising results are also obtained by applying the model framework to the forecasting of major market turning periods. Having shown that system theoretic ideas can form the core of a novel and effective basis for stock market analysis, the book is completed by an indication of possible and likely future expansions of the research in this area.

**Stock Market Investing Strategies For Beginners** Shawn Anderson,2020-10-06 Have you ever heard the word investing before but you have never understood what it really means It s actually quite simple it means making your money work while you do what you want Basically it s a different way of thinking about how to make money While growing up most of us have been taught that we can only earn an income by finding a good job and that s exactly what most of us do However there is a big problem with this if you want more money you have to work longer hours However there is a limit to the number of hours a day we can work on not to mention the fact that having a lot of money is not fun if we do not have the time to enjoy it This is why rich people do not have a job they have businesses that work for them Think about it you have a job that allows you to earn over 2000 dollars a month but that takes you over 13 hours a day 6 days out of 7 so about 11 remain and usually the hours of sleep should be at least 7 8 for a healthy lifestyle Considering also the displacements and the time lost to go to work you have 3 to 4 hours left where you most likely will use 2 for dinner in the evening In the end there are 2 actual hours of time per day which do not allow you to enjoy life to the fullest You will find yourself having a 2000 dollars a month salary which nowadays is nothing that will continue to accumulate as you will not absolutely enjoy them in any way This is what is often called the rat race Is there a solution Yes it exists and it is to take part of your money and invest it properly in the financial markets By doing so you are letting it work for you The possibilities are scary and extremely profitable Do you want one example Take a look at Apple s stocks Apple s stocks have risen at a frightening rate in the last 10 years from 10 to about 100 This means that with an investment of only 1 000 you would now have over 10 thousand dollars This is the power of

online investing it allows you to grow your money in a totally automatic way Unfortunately there is no duplication of self to increase the time at work but instead you can create an extension of yourself that is your money and put it to work In this way while you are working for your employer or while you are at the bar with friends you can still earn at the same time thanks to the investment you made In a very simple way therefore you can make your money useful thus maximizing your earning potential even if you do not receive an increase in your pay or even if you do not decide to make an extraordinary one or you are looking for a more remunerative job There are many ways to do this This includes investing your money in stocks bonds mutual funds forex CFDs or real estate and many other things or even starting your own online business like affiliate marketing Sometimes people refer to these options as investment vehicles which is just another way of saying a way of investing

**A Practical Introduction to Day Trading** Don Charles,2018-11-14 Many individuals enter financial markets with the objective of earning a profit from capitalizing on price fluctuations However many of these new traders lose their money in attempting to do so The reason for this is often because these new traders lack any fundamental understanding of financial markets they cannot interpret any data and they have no strategy for trading Trading in markets is really about deploying strategies and managing risks Indeed successful traders are those who have strategies which they have proved to be consistent in granting them more financial gains than financial losses The purpose of this book is to help a potentially uninformed retail trader or inquisitive reader understand more about financial markets and assist them in gaining the technical skills required to profit from trading It represents a beginner s guide to trading with a core focus on stocks and currencies
