Creation of Value, Art Or Science ? Jad Saade,2001 The equity markets are an integral part of any dynamic economy They provide liquidity for a nation and facilitate the creation of wealth Since the oldest stock markets opened in Europe and then subsequently in North America investors have been trying to harness their powers to achieve higher gains Many charlatans have come and gone professing to know the secrets of how the correctly predict the markets In reality there are only two types of stock market analyses Fundamental analysis and technical analysis The latter is the subject of this paper This paper will deal with the most important elements of technical analysis by showing practical applications of each and how the investor can use them in his own trading system It shows each type of investor what information s are best to trade riskiest to trade safest to trade profitable expensive among other benefits This paper proposes a model of stock analysis that can be used to determine when to purchase a stock The model is based on charts and thus is purely a technical tool It succeeds in identifying stocks that are poised to go up in the near future Moreover this model is an original work in the field of technical stock market analysis Technical analysis is a unique form of stock market study It is purely a nonacademic field used only to make a profit in stocks In other words empirically or mathematically technical analysis has no foundations It cannot be proved or disproved using conventional academic techniques Moreover it will become evident from this paper that technical analysis is no more than an exercise in trial and error
