### Introduction

Advertising is an indispensable part of the modern informational space. A great amount of advertising on TV and on the internet has a significant impact on adolescents' mentality, as children lack the experience and knowledge that would help them to differentiate real facts and marketing tools. Commercials influence adolescents' worldview in a negative way and enhance the attractiveness of a consumer lifestyle.

There are two main controversial points of view on the responsibility of advertising. The first statement claims parents to be responsible for protecting their children from the negative impact of advertising. The second statement considers this issue to be a problem that should be solved at the state level. This research is aimed at analyzing existing viewpoints with regard to influence of advertising on adolescents' mentality. The research will also offer a range of methods that will be helpful for channeling and restricting the negative effects of advertisements on children.

Franks,2007-10-03 Proteins are the servants of life They occur in all component parts of living organisms and are staggering in their functional variety despite their chemical similarity Even the simplest single cell organism contains a thousand different proteins fulfilling a wide range of life supporting roles Their production is controlled by the cell's genetic machinery

and a malfunction of even one protein in the cell will give rise to pathological symptoms Additions to the total number of known proteins are constantly being made on an increasing scale through the discovery of mutant strains or their production by genetic manipulation this latter technology has become known as protein engineering The in vivo functioning of proteins depends critically on the chemical structure of individual peptide chains but also on the detailed folding of the chains themselves and on their assembly into larger supramolecular structures The molecules and their functional assemblies possess a limited in vitro stability Special methods are required for their intact isolation from the source material and for their analysis both qualitatively and quantitatively Proteins are also increasingly used as industrial components e g in biosensors and immobilized enzymes because of their specificity selectivity and sensitivity This requires novel and refined processing methods by which the protein isolate can be converted into a form in which it can be utilized
