Nature of Science in General Chemistry Textbooks Mansoor Niaz, Arelys Maza, 2011-07-15 Research in science education has recognized the importance of history and philosophy of science HPS Nature of science NOS is considered to be an essential part of HPS with important implications for teaching science The role played by textbooks in developing students informed conceptions of NOS has been a source of considerable interest for science educators In some parts of the world textbooks become the curriculum and determine to a great extent what is taught and learned in the classroom Given this background and interest this monograph has evaluated NOS in university level general chemistry textbooks published in U S A Most textbooks in this study provided little insight with respect to the nine criteria used for evaluating NOS Some of the textbooks however inevitably refer to HPS and thus provide guidelines for future textbooks A few of the textbooks go into considerable detail to present the atomic models of Dalton Thomson Rutherford Bohr and wave mechanical to illustrate the tentative nature of scientific theories an important NOS aspect These results lead to the question Are we teaching science as practiced by scientists An answer to this question can help us to understand the importance of NOS by providing students an HPS based environment so that they too just like the scientists feel the thrill and excitement of discovering new things This monograph provides students and teachers guidelines for introducing various aspects of NOS based on historical episodes

The Great

Creation Debate Brad Freckleton, 2012-07 Why isn't the evolution of flight shown in the fossil record? Bugs, birds, bats, and dinosaurs flew and are shown fully formed in the fossil record, but there are no animals with halfway wings in the fossil record leading from ground-based animals to flying animals. What is desperately wrong with the Grand Canyon if evolution is true? Where are the massive signs of erosion between the sedimentary layers of the Grand Canyon if they were laid down a million years at a time? Why does massive erosion only show up at the top? Animals with well-developed eyes show up suddenly in the fossil record as do flying animals. It's the norm for plants and animals to show up in the fossil record with the same separations as we see in different types of living animals and plants today. The second law of thermodynamics is a law of science that says everything left to its own will wear out, run down. It is a fundamental law of science. So how did evolution accidentally go up? How could a DNA molecule fumble together? The cell needs DNA, DNA needs the cell, which came first? Beneficial mutations also weaken in other areas and don't write evolutionary advancing DNA code. Spiral galaxies, which have the shape of a starfish that is spinning quickly throughout our universe like our Milky Way galaxy, are supposed to be over 10 billion years old. If they were over a billion years old, they would lose their spiral arm shape. The arms of our galaxy, the Milky Way, only show a maximum age of 0.3 billion years. People want to know why they're here now and where they're going to go. They want surety of truth also. Read this book and see how well evolution holds up in all the sciences. Read this book and see if life can have meaning, direction, and hope with surety. For those who claim to be open-minded, put on your seatbelts and keep your arms inside as you ride the roller coaster of your own value systems. **Cumulated Index to the Books**, 1999

Valency and Bonding Frank Weinhold, Clark R. Landis, 2005-06-17 The first modernized overview of chemical valency and bonding theory based on current computational technology. **The ^A Periodic Table** Eric Scerri, 2019-10-21 The Periodic Table: Its Story and Its Significance traces the evolution and development of the periodic table from Mendeleev's 1869 first published table and onto the modern understanding provided by modern physics. **Notes konserwatorski**, 2004

Magic and Illusion in the Movies George Higham, 2024-11-07 From top hats to top secrets, this book is a celebration of illusion technology and mechanisms of trickery through a genre-crossing selection of films. Heroes, villains, spies, con men, and madmen, magicians all have utilized complex constructs and trickery in thrilling cinematic adventures from the earliest days of cinema to the present. Current blockbusters such as Spider-Man, Far from Home, and the Mission Impossible series feature amazing acts of deception, often appearing far-fetched that are in fact surprisingly close to today's technology. Along with the James Bond saga classics such as The Wizard of Oz, Nightmare Alley, and The Sting are joined by a host of other movies superficially seeming to be very different yet proving there is more than meets the eye.
