Arithmetic Counts! Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children's love of games songs and movement he's proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It's no longer just their teacher's math It's their math America's children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That's acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don't You know that to be true if you've ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget

Creating Compassionate Classrooms: Understanding the Continuum of Disabilities and Effective Educational Interventions Nicholas D. Young, Angela C. Fain, Teresa A. Citro, 2019-05-02 Throughout the chapters of this book the reader will be introduced to the thirteen disability categories included in IDEA specific learning

disabilities emotional behavioral disorders autism other health impaired intellectually disabled multiple disabilities speech or language impairments traumatic brain injury hearing impairment deaf blind deafness visual impairment and orthopedic impairment using the legally established definitions Lengthy descriptions of best practices modifications and accommodations follow offering a complete picture of each disability and how educators and parents collaboratively can assist the struggling student To set the stage the book begins with chapters that discuss special education in general response to intervention as an intermediary step in the academic continuum of support and the individualized education plan process Subsequent chapters examine each of the thirteen aforementioned IDEA disability categories which have not been commonly incorporated into one comprehensive resource however for the sake of brevity some disability categories have been combined when doing so did not impact practice implications Emphasis is placed on effective classroom strategies and interventions associated with each disability category with the intent of providing practitioners and those who support them with the information and tools necessary to support students with identified educational needs To the extent possible the primary authors sought to ensure this resource was practical and user friendly for educators who work directly with students with the range of recognized disabilities This book demystifies the special education process and disability categories as well as offers educators and their families the tools to help our students who have one or more disabilities find life long success Ensuring the best for our students with disabilities requires that we first acknowledge and support the hard work and deep commitment of those professionals and parents guardians who devote their lives to teaching reaching mentoring and advocating for those most vulnerable in our classrooms

Developing Mathematical Reasoning Pamela Weber

Harris, 2025-02-18 Math is not rote memorizable Math is not random guessable Math is figure out able Author Pam Harris argues that teaching real math math that is free of distortions will reach more students more effectively and result in deeper understanding and longer retention This book is about teaching undistorted math using the kinds of mental reasoning that mathematicians do Memorization tricks and algorithms meant to make math easier are full of traps that sacrifice long term student growth for short lived gains Students and teachers alike have been led to believe that they've learned more and more math but in reality their brains never get any stronger Using these tricks may make facts easier to memorize in isolation but that very disconnect distorts the reality of math The mountain of trivia piles up until students hit a breaking point Humanity's most powerful system of understanding organizing and making an impact on the world becomes a soul draining exercise in confusion chaos and lost opportunities Developing Mathematical Reasoning Avoiding the Trap of Algorithms emphasizes the importance of teaching students increasingly sophisticated mathematical reasoning and understanding underlying concepts rather than relying on a set rule for solving problems This book illuminates a hierarchy of mathematical reasoning to help teachers guide students through various domains of math development from basic counting and adding to more complex proportional and functional reasoning Everyone is capable of understanding and doing real math This book Highlights the

important mathematical relationships strategies and models for students to develop Offers personal stories reflection sections and extensive practical exercises for easy implementation Includes real math a lot of it to provide teachers with examples they can put to use in their classrooms immediately This book is a valuable resource for educators looking to reach more students by building a strong foundation of mathematical thinking in their students By addressing common misconceptions about math and providing practical strategies for teaching real math this book shows that everyone can use the mathematical relationships they already know to reason about new relationships In other words everyone can math

Provides a wide variety of educational recommendations and evidence based strategies **School Neuropsychology** James B. Hale, Catherine A. Fiorello, 2004-03-24 This important resource presents the latest information on brain behavior relationships and describes ways school practitioners can apply neuropsychological principles in their work with children Bridging the gap between neuropsychological theory assessment and intervention this accessible text addresses complex topics in a straightforward easy to understand fashion The authors challenge previous conceptions about brain functions and present the cognitive hypothesis testing model an innovative method that helps practitioners form accurate understandings of learner characteristics and conduct meaningful and valid individualized interventions with children with a range of learning and behavior disorders Including case studies and examples that illustrate what practitioners might actually see and do in the classroom the volume comes in a large size format with reproducible worksheets and forms Elementary School Teachers' Mathematics Instructional Decision Making in the Context of District Mandates on Instruction Heather Anne Martin, 2008 In the current educational climate teachers in low performing schools are experiencing pressure from state and district policy makers to raise student performance on state tests Some district administrations have undertaken various measures including implementing numerous and specific mathematics content standards adopting particular curricular packages and requiring teachers to use them as their primary instructional materials and even creating pacing guides with uniform timelines for presenting lessons to students These efforts have had the cumulative effect of urging teachers to stick closely to a standard curriculum in order to raise student test scores Teachers must also interpret and attend to the needs of their students and ideally teach their students to understand mathematical concepts and processes as opposed to narrowly mastering procedural skills It may not always be possible to both follow administrative mandates about instruction and meet student needs and teachers may have to make a compromise between these two objectives In this study I examined how elementary school teachers in a particular accountability pressured school decided to teach mathematics Drawing on multiple interviews and ten classroom observations per teacher I created portraits of the mathematics instructional choices of four second grade teachers including their use of instructional materials such as textbooks I drew on an analytical framework adapted from Stein Grover and Henningsen 1996 to assess various features of the lesson in order to note the interaction between the materials and the teachers decisions about how to use them I developed a lesson signature for each teacher a visual representation of the typical organization of the teacher s lessons and how materials were used within them My findings indicated that the teachers individual goals for their teaching beliefs about their students needs and interpretations of the district s curricular mandates interacted to steer their instructional choices to very different results Two of the teachers dutifully followed the textbook while two essentially disregarded it in favor of other materials Teachers own senses of their autonomy to make curricular decisions and their support for their students autonomy in learning math

emerged as important factors I suggest implications for teacher professional development and curricular materials development
