World Development Report 1983:

World Development Report 1983, 1983 This report is the sixth in an annual series assessing development issues It reviews recent trends in the international economy and their implications for the developing countries with a special focus on the management and institutional aspects of development The early recovery in the world economy foreseen in last year's World Development Report did not materialize The recession has lasted longer than expected and has set back global development more decisively than at any time since the Great Depression The indications of an upturn are now firmer but the international financial system remains severely strained and protectionism continues to be an ominous threat This report reviews how alternative policies may affect the future prospects for recovery It concludes that the present financial crisis is manageable provided concerted efforts are made both nationally and internationally It is essential for the industrial countries to maintain the momentum of their recovery to promote freer trade and to ensure growth in capital flows Equally important developing countries must for their part continue their efforts to adjust their economies to the new external circumstances and thereby regain the confidence of their creditors

The Politics of Global Competitiveness Paul Cammack, 2022 Marx predicted in *Capital* 1867 that as capitalism became global patterns of work would be transformed and workers would need to develop versatility flexibility and mobility This general law of social production as he called it is now in evidence all around us in global value chains zero hours contracts and contract work organised through digital platforms It results from competition between capitalists scientific and technological revolutions in production and incessant advances in the division of labour as production processes are broken down into ever smaller steps This book documents the leading roles of the Paris based Organisation for Economic Cooperation and Development and the Washington based World Bank as advocates of these developments They do not as generally supposed simply represent the interests of the advanced economies or the West and their transnational corporations They promote a single global model of capitalist development without limits and on a genuinely global scale It calls upon all states to adjust continually to the structural and social demands of competitiveness which they see as essential to the global hegemony of capital over labour The OECD and the World Bank propose policies that give girls and women equal access to education and paid work reform welfare to make work pay introduce flexible labour contracts that make hiring and firing easier focus education on skills that boost employability and draw workers in the developing world from the informal sector into the formal sector where they can be more productive This is the politics of global competitiveness

internally generated *Global Geopolitical Power and African Political and Economic Institutions* John James Quinn, 2015-12-30 *Global Geopolitical Power and African Political and Economic Institutions* When *Elephants Fight* describes the emergence and nature of the prevailing African political and economic institutions in two periods In the first most countries adopted political and economic institutions that funneled significant levels of political and economic power to the political elites usually through one or no party military political systems inward oriented development policies and or state led and often state owned industrialization In the second period most countries adopted institutions that diluted the overarching political and economic power of ruling elites through the adoption of de jure multiparty electoral systems more outward oriented trade policies and the privatization of many state owned or controlled sectors though significant political and economic power remains in their hands The choices made in each period were consistent with prevailing ideas on governance and development the self interests of political elites and the perceived availability of support or autonomy vis vis domestic regional and international sources of power at the time This book illustrates how these two region wide shifts in prevailing political and economic institutions and practices of Africa can be linked to two prior global geopolitical realignments the end of WWII with the ensuing American and Soviet led bipolar system and the end of the Cold War with American primacy Each period featured changed or newly empowered international and regional leaders with competing national priorities within new intellectual and geopolitical climates altering the opportunities and constraints for African leaders in instituting or maintaining particular political and economic institutions or practices The economic and political institutions of Africa that emerged did so as a result of a complex mix of contending domestic regional and international forces material and intellectual all which were themselves greatly transformed in the wake of these two global geopolitical realignments *The Tyranny of Numbers* Nick Eberstadt, 1995 In this wide ranging study Nicholas Eberstadt demonstrates that some of the most basic of today s domestic and foreign policies have been buttressed or justified by what turns out to be misanalysis or misuse of available facts and figures *The Tyranny of Numbers* not only warns about the ways the statistics are being misused in government policy in the United States and abroad but explains how this process can end up injuring vulnerable groups or distorting the workings of the democratic system *Foreign Trade Reforms and Development Strategy* Jean-Marc Fontaine, 2005-07-27 An effective rebuttal to the orthodox view that developing countries should liberalise their trade policies The contributors consider both the theoretical framework and the empirical evidence *Challenging the State* Merilee S. Grindle, 1996-02-23 The 1980s and 1990s posed great challenges to governments in Latin America and Africa Deep economic crises and significantly heightened pressure for political reform severely taxed their capacity to manage economic and political tasks These crises pointed to an intense need to reform the state and redefine its relationship to the market and civic society This book examines the paradox of states that have been weakened by crisis just as their capacity to encourage economic development and provide for effective governance most needs to be strengthened Case studies of

Mexico and Kenya allow the author to analyse the opportunities available for political leadership in moments of crisis and the constraints on action provided by leadership goals and existing political and economic structures. She argues that while leaders and political structures are often part of the problem they can also be part of the solution in building more efficient effective and responsive states.

Debt and Disorder John Loxley, 2019-03-13 One of the most important and controversial challenges facing the international financial and trading system is the need for developing countries to meet their high and rapidly growing external debt obligations and foreign exchange requirements. Developing countries have suffered major shocks in the form of global recession, high real interest rates, weakened terms of trade and rising protectionism against their exports. The International Monetary Fund, the World Bank, Western central banks and private financial institutions are seeking to avoid a collapse of the international financial system and developing countries are seeking to grow through increased trade and access to external financing. Yet the fragility of current international trade and monetary systems seriously threatens the achievement of both sets of objectives. Professor Loxley integrates the structural adjustment experience of Third World countries with the policies, practices and relationships of external financial agents in his discussion of options for reforming policy and of the limitations inherent in implementing these reforms.

Governing the Market Robert Wade, 2018-06-05 Published originally in 1990 to critical acclaim, Robert Wade's *Governing the Market* quickly established itself as a standard in contemporary political economy. In it, Wade challenged claims both of those who saw the East Asian story as a vindication of free market principles and of those who attributed the success of Taiwan and other countries to government intervention. Instead, Wade turned attention to the way allocation decisions were divided between markets and public administration and the synergy between them. Now in a new introduction to this paperback edition, Wade reviews the debate about industrial policy in East and Southeast Asia and chronicles the changing fortunes of these economies over the 1990s. He extends the original argument to explain the boom of the first half of the decade and the crash of the second, stressing the links between corporations, banks, governments, international capital markets and the International Monetary Fund. From this, Wade goes on to outline a new agenda for national and international development policy.

The Global Economic System I. Wallace, 2002-09-26 The author provides a treatment of world economic geography as a whole. He sets out the historical context of the modern world along with the principal philosophies that have shaped our study of it and identifies the importance of the biophysical environment as well as cultural and political settings for economic activity.

Arguing Development Policy Raymond Apthorpe, Des Gasper, 2014-06-23 This collection shows how policy discourses in the fields of national and international developments are constructed and operate and how they can be analysed. Dominant discourses screen out certain aspects, they frame issues to include some matters and typically exclude important others. More generally, different policy discourses construct the world in distinctive ways through language that requires deconstruction and careful review.
