**Topic Drop and Null Subjects in German** Ewa Trutkowski,2016-04-25 This monograph deals with argument drop in the German prefield and it presents new insights into null subjects topic drop and the interpretation of topic dropped elements Major issues are inter alia the drop of structurally vs obliquely cased arguments and the question on which basis nominative accusative and dative genitive can be kept apart Furthermore it is shown that the impossibility of phi feature mismatches concerning the antecedent and gap in topic drop dialogues allows to differentiate between coreference and real quantifier binding Aside from topic drop 1st 2nd vs 3rd person null subjects are investigated across a couple of unrelated languages also focusing on the presence of syncretisms within verbal inflectional paradigms It is proven that 1st 2nd person null subjects in German are not an instance of antecedent dependent topic drop but that they are licensed by discrete verbal inflectional endings Thus according to this property German can be classified as a partial pro drop language Next to theoretical discussions and considerations this book offers a broad empirically covered data basis which makes it suitable for both theoretically and empirically interested generative linguists

Tailoring NK Cell Receptor-Ligand Interactions: an Art in Evolution, 2nd Edition Ulrike Koehl,Antoine Toubert,Gianfranco Pittari,2018-11-13 Recognition and killing of aberrant infected or tumor targets by Natural Killer NK cells is mediated by positive signals transduced by activating receptors upon engagement of ligands on target surface These stimulatory pathways are counterbalanced by inhibitory receptors that raise NK cell activation threshold through negative antagonist signals While regulatory effects are necessary for physiologic control of autoimmune aggression they may restrain the ability of NK cells to activate against disease Overcoming this

barrier to immune surveillance multiple approaches to enhance NK mediated responses are being investigated since two decades Propelled by considerable advances in the understanding of NK cell biology these studies are critical for effective translation of NK based immunotherapy principles into the clinic In humans dominant inhibitory signals are transduced by Killer Immunoglobulin Like Receptors KIR recognizing cognate HLA class I on target cells Conversely KIR recognition of missing self HLA due to HLA loss or HLA KIR mismatch triggers NK mediated tumor rejection Initially observed in murine transplant models these antitumor effects were later found to have important implications for the clinical outcome of haplotype mismatched stemcell transplantation Here donor NK subsets protect against acute myeloid leukemia AML relapse through missing self recognition of donor HLA C allele groups C1 or C2 and or Bw4 epitope These studies were subsequently extended by trials investigating the antileukemia effects of adoptively transferred haplotype mismatched NK cells in non transplant settings Other mechanisms have been found to induce clinically relevant NK cell alloreactivity in transplantation e g post reconstitution functional reversal of anergic NK cells More recently activating KIR came into the spotlight for their potential ability to directly activate donor NK cells through in vivo recognition of HLA or other ligands Novel therapeutic monoclonal antibodies mAb may optimize NK mediated effects Examples include obinutuzumab GA101 a glyco engineered anti CD20 mAb with increased affinity for the Fc RIIIA receptor enhancing antibody dependent cellular cytotoxicity lirilumab IPH2102 a first in class NK specific checkpoint inhibitor blocking the interaction between the major KIR and cognate HLA C antigens and elotuzumab HuLuc63 a humanized monoclonal antibody specific for SLAMF7 whose anti myeloma therapeutic effects are partly due to direct activation of SLAMF7 expressing NK cells In addition to conventional antibodies NK cell targeted bispecific BiKEs and trispecific TriKEs killer engagers have also been developed These proteins elicit potent effector functions by binding target ligands e g CD19 CD22 CD30 CD133 HLA class II EGFR on one arm and NK receptors on the other An additional innovative approach to direct NK cell activity is genetic reprogramming with chimeric antigen receptors CAR To date primary NK cells and the NK92 cell line have been engineered with CAR specific for antigens expressed on multiple tumors Encouraging preclinical results warrant further development of this approach This Research Topic welcomes contributions addressing mechanisms of NK mediated activation in response to disease as well as past and contemporary strategies to enhance NK mediated reactivity through control of the interactions between NK receptors and their ligands

**Collected Works (volume 1): Published Papers** Stephen Luttrell, 2023-10-24 The motivation for the research that is described in these volumes is the wish to explain things in terms of their underlying causes rather than merely being satisfied with phenomenological descriptions When this reductionist approach is applied to information processing it allows the internal structure of information to be analysed so information processing algorithms can then be derived from first principles One of the simplest examples of this approach is the diagonalisation of a data covariance matrix there are many variants of this basic approach such as singular value decomposition in which the assumed independent components of high

dimensional data are identified and extracted. The main limitation of this type of information analysis approach is that it is based on linear algebra applied globally to the data space so it is unable to preserve information about any local data structure in the data space. For instance, if the data lives on a low dimensional curved manifold embedded in the data space, then only the global properties of this manifold would be preserved by global linear algebra methods. In practice, data whose high dimensional structure is non-trivial typically lives on a noisy version of a curved manifold, so techniques for analysing such data must automatically handle this type of structure. For instance, a blurred image of a point source is described by its underlying degrees of freedom, i.e. the position of the source, and as the source moves about it generates a curved manifold that lives in the high dimensional space of pixel values of the sampled image. The basic problem is then to deduce the internal properties of this manifold by analysing examples of such images. A more challenging problem would be to extend this analysis to images that contain several overlapping blurred images of point sources and so on. There is no limit to the complexity of the types of high dimensional data that one might want to analyse. These methods then need to be automated so that they do not rely on human intervention, which would then allow them to be inserted as components into information processing networks. The purpose of the research that is described in these volumes is to develop principled information processing methods that can be used for such analysis. Self-organising information processing networks arise naturally in this context in which ways of cutting up the original manifold into simpler pieces emerge automatically.

**International Marketing** Dana-Nicoleta Lascu, 2022-03-02 Written during a period of economic, political, and social instability, largely due to the disruptions spurred by the pandemic, with continued COVID-19 lockdowns, inflationary pressure, supply chain constraints, and other economic and political challenges to international trade, the Seventh Edition offers insights into the resulting local and multinational firms' management of marketing operations. The revised edition includes updated and new material throughout, new and fully updated cases, all new Video Labs, new coverage of trade theory, additional coverage of international trade agreements to address increasingly influential trade bodies. The book expands the focus on market analysis by including several new sections such as international marketing analytics and other country and region-specific market assessments and product analyses. The book reflects the author's teaching philosophy, presenting dynamic, timely, real-world examples that help students to better understand international marketing in action. Professor Lascu shares her own perspectives as a product of different cultures who actively experiences, observes, and studies marketing across the world, chairing international conferences even as the pandemic continues to exacerbate geographical, political, and economic divides.

**Micronutrients in Health and Disease, Second Edition** Kedar N. Prasad, 2019-04-15 Increased oxidative stress due to the production of excessive amounts of free radicals along with the effects of chronic inflammation plays a major role in the initiation and progression of most chronic diseases In addition increased release of glutamate plays a central role in the pathogenesis of various disorders This second edition of Micronutrients in Health and Disease proposes a novel concept that in order to simultaneously and optimally reduce oxidative stress chronic inflammation and glutamate it is essential to increase levels of antioxidant enzymes as well as levels of dietary and endogenous antioxidant compounds at the same time This is accomplished by activating the Nrf2 pathways and by increasing the levels of antioxidant compounds and B vitamins through supplementation This book proposes a mixture of micronutrients that achieves this above goal The mixture of micronutrients together with modification in diet and lifestyle may reduce the risk of chronic diseases and in combination with standard care may improve the management of these diseases

**KEY FEATURES** Provides evidence in support of the idea that increased oxidative stress chronic inflammation and glutamate are involved in the pathogenesis of chronic diseases Contains three new chapters on Huntington's disease Autism spectra and Prion disease Discusses the role of microRNAs in the pathogenesis of chronic diseases Presents information on regulation of the expression of microRNAs by reactive oxygen species and antioxidants Micronutrients in Health and Disease Second Edition serves as a valuable resource for those seeking to promote healthy aging and prevent and improved management of chronic diseases
