Richard Morphy, C John Harris, 2012-03-28 Multi target drug discovery MTDD is an emerging area of increasing interest to the drug discovery community Drugs that modulate several targets have the potential for an improved balance of efficacy and safety compared to single targets agents Although there are a number of marketed drugs that are thought to derive their therapeutic benefit by virtue of interacting with multiple targets the majority of these were discovered accidentally Written by world renowned experts this is the first book to gather together knowledge and experiences of the rational discovery of multi target drugs It describes the current state of the art the achievements and the challenges of the field and importantly the lessons learned by researchers to date and their application to future MTDD Myc as a Disease Target Beyond Cancer Jonathan R. Whitfield, Mariano F. Zacarias-Fluck, John Sedivy, Yulia A. Nevzorova, 2024-09-02 Myc is a pleiotropic transcription factor fundamental for many cellular processes It is an infamous and highly studied oncogene with around 10 000 articles published in the last decade The majority of these link it to cancer The focus on Myc as a hot target in cancer has led to immense efforts from academia through to pharmaceutical companies being directed towards finding a Myc inhibitor Not surprisingly given its fundamental nature in many physiological processes Myc has also been linked to a large variety of pathologies other than cancer The growing efforts to develop Myc inhibitors as cancer therapies will have important implications for the treatment of these diseases too whether they have a clearly demonstrated aetiology linked with Myc or so far are only at early stages of association with it Interestingly the activation of Myc may also prove helpful in the field of regenerative medicine and reversal of ageing The aim of this Research Topic is therefore to describe non oncological pathologies and conditions to which Myc modulation could be applied These will include conditions that have strong links to Myc and where Myc modulation has already been modelled as well as conditions that so far have more limited

data linking them to Myc but where it seems to have a key role Authors will be expected to briefly review the particular disease and what is known to link Myc to it plus the possibility of any clinical trials in the near future
