American law enforcement is a system in crisis After explosive protests responding to police brutality and discrimination in Baltimore Ferguson and a long list of other cities the vexing question of how to reform the police and curb misconduct stokes tempers and fears on both the right and left In the midst of this fierce debate however most of us have taken for granted that innovative new technologies can only help During the early 90s in the wake of the infamous Rodney King beating police leaders began looking to corporations and new technologies for help In the decades since these technologies have in theory

given police powerful previously unthinkable faculties the ability to incapacitate a suspect without firing a bullet Tasers the capacity to more efficiently assign officers to high crime areas using computers Compstat and with body cameras a means of defending against accusations of misconduct But in this vivid deeply reported book Matt Stroud shows that these tools are overhyped and in many cases ineffective Instead of wrestling with tough fundamental questions about their work police leaders have looked to technology as a silver bullet and stood by as corporate interests have insinuated themselves ever deeper into the public institution of law enforcement With a sweeping history of these changes *Thin Blue Lie* is a must read for anyone seeking to understand how policing became what it is today
